

Do it straight (2)

[TS-WXL](#)

[The other day](#), I failed to make [a](#) clean HDD.

Maybe because there is no partition.

If you create partitions in advance, you should have a clean HDD.

Creating partitions

Connect the experimental HDD to LS-QL and create a parted partition.

```
qube:~# parted -s /dev/sdb mklabel gpt
qube:~# parted -s /dev/sdb mkpart primary ext3 0 1024M
qube:~# parted -s /dev/sdb mkpart primary ext3 1024MB 6144MB
qube:~# parted -s /dev/sdb mkpart primary xfs 6144MB 6144MB
qube:~# parted -s /dev/sdb mkpart primary xfs 6144MB 6144MB
qube:~# parted -s /dev/sdb mkpart primary linux-swap 6144MB 7168MB
qube:~# parted -s /dev/sdb mkpart primary xfs 7168MB 500GB
qube:~# parted -s /dev/sdb print
Model: ViPowER VP-89118(SD1) (scsi)
Disk /dev/sdb: 500GB
Sector size (logical/physical): 512B/512B
Partition Table: gpt
```

Number	Start	End	Size	File system	Name	Flags
1	17.4kB	1024MB	1024MB		primary	
2	1024MB	6144MB	5120MB		primary	
3	6144MB	6144MB	512B		primary	
4	6144MB	6144MB	512B		primary	
5	6144MB	7168MB	1024MB		primary	
6	7168MB	500GB	493GB		primary	

qube:~#

Mmmm, File system is not shown.

Set of HDD

Set the experimental HDD on the LS-QL mounter and pierce the TS-WXL

Power ON

Insert TS-WXL into outlet and power on

Boot from NAND Flash

Execute firmware updater

Execute TSUpdater.exe located in C:\Documents and Settings\yasunari\Desktop\tsx-120\TS-X_FW1.20 on the PC.

"The partition information of the

HDD could not be confirmed. Format the HDD and update the firmware

Are you sure you want to format the HDD? "

Of course "Yes (Y)"

After all ,,,

"Format failed (ACP_STATE_FILURE) Aborting
update"

When. Unfortunately, the
serial console

```
-- rebuild mdadm.conf for BOOT, ROOTFS --  
mdadm: No arrays found in config file  
-- setup max error counts --  
/sys/block/md0/md/maxerr_cnt is setted to 20  
EXT3-fs: unable to read superblockttd to 20  
  
/sys/block/md10EXT2-fs: unable to read superblock  
/md/maxerr_cnt is setted to 20  
mount: mounting /dev/md0 on /boot failed: Input/output error  
_disk1 = / dev / s  
sda = / dev / disk1  
disk drive is missing
```

It has come out. . .
