

Install MovableType

[Debian TS-WXL](#)

The directory tree where MT 4.x has already been installed has been copied.

By the way, publishing the version and settings of packages installed on the server is a suicide act.
The package may be exploited for vulnerabilities or misconfigurations.

Therefore, the following is omitted (お い

I tried various things, but it was fast!

As expected, 800MHz ARM. A clear difference from the 266MHz PPC.

Maybe simply because there is little data,

The UI has changed a lot. Let's play around
