

Fine ! It works on Raspberry Pi 4B (raspbian buster)

Here is minimal command lines to be able to start on new Raspberry Pi 4B :

Installation on RPI 4B

1. Execute this first command on your terminal :

```
curl -s https://packagecloud.io/install/repositories/headmelted/codebuilds/script.deb.sh | sudo bash
```

2. Continue with this second command :

```
curl -L https://code.headmelted.com/installers/apt.sh | sudo bash
```

Change Code-OSS version

1. To Remove the current version

```
sudo apt-get purge code-oss
```

2. To install new version

```
sudo apt-get install code-oss=1.29.0-1539702286
```

3. To prevent Downgrade from Updating Automatically

```
sudo apt-mark hold code-oss
```
