Debootstrap in standard farm

[TS-WXL](#)

Speaking of which, I haven't checked if I can debootstrap on a standard farm.
Is it possible to debootstrap on a standard farm without having to bother with RamRoot? ? ?

Creating an experimental HDD

From the reflection of copying the disk to make a test HDD, set
the SAMSUNG HD501LJ with the partition deleted on HDD 1 to the
HDD of the standard firmware in HDD 2 and
turn on the power.

The LCD and the ERROR LED turn red,

Format disk 1 from Web management screen,
power off

Remove HDD 1
, connect to LS-QL with USB,
mount and erase root password

```
qube:~# mkdir /tmp/root
qube:~# mount -t ext3  /dev/sdb2 /tmp/root
qube:~# ls /tmp/root
bin  boot  dev  etc  home  initrd  lib  lighttpd.webui  lost+found  mnt  modules  proc  root  sbin  sys  tmp  usr  var  www
qube:~# cd /tmp/root/etc/
qube:/tmp/root/etc# mv shadow shadow.orig
qube:/tmp/root/etc# sed -e 's/^root:[^:]*:/root::/' shadow.orig > shadow
qube:/tmp/root/etc# grep root shadow
root::11009:0:99999:7:::
qube:/tmp/root/etc# chmod 600 shadow
qube:/tmp/root/etc# cd /
qube:/# umount /tmp/root
qube:/#
```

Remove from LS-QL and set as HDD1 of LS-WXL
Power ON

Access http://192.168.2.70//cgi-bin/task.cgi?task=console¶m=on&uuu=admin&ppp=password from the web.

Login from serial console

```
BUFFALO INC. TeraStation series
TS-WXL3B3 login: root
root@TS-WXL3B3:~#
```

ar and wget

Check for ar and wget.

```
root@TS-WXL3B3:~# which ar
root@TS-WXL3B3:~# which wget
/usr/bin/wget
root@TS-WXL3B3:~#
```

After all, there is no ar.
