Email setup

[Debian](#) [TS-WXL](#)

Set up exim.
Basically the same as for [HS-DHGL](#) .
There is no local mail spool, and all mail is sent using ns.yamasita.jp as a smart host.

Confirm Installation

```
tswxl:~# dpkg -l exim
Desired=Unknown/Install/Remove/Purge/Hold
| Status=Not/Inst/Cfg-files/Unpacked/Failed-cfg/Half-inst/trig-aWait/Trig-pend
|/ Err?=(none)/Hold/Reinst-required/X=both-problems (Status,Err: uppercase=bad)
||/ Name                         Version                 Description
+++-=============================-==============================-===========================================================================
an exim                                                 (no description available)
tswxl:~# dpkg -l | grep exim
ii  exim4                        4.69-9                  metapackage to ease Exim MTA (v4) installati
ii  exim4-base                   4.69-9                  support files for all Exim MTA (v4) packages
ii  exim4-config                 4.69-9                  configuration for the Exim MTA (v4)
ii  exim4-daemon-light           4.69-9                  lightweight Exim MTA (v4) daemon
odxl: ~ #
```

exim4 is installed.

setup

```
tswxl:~# dpkg-reconfigure exim4-config
```

Setting items	Set value
General type of mail configuration	mail sent by smarthost; no local mail
System mail name	tswxl.yamasita.jp
IP-addresses to listen on for incoming SMTP connections	127.0.0.1
Other destinations for which mail is accepted	tswxl.yamasita.jp
Visible domain name for local users	tswxl.yamasita.jp
IP address or host name of the outgoing smarthost	ns.yamasita.jp
Keep number of DNS-queries minimal (Dial-on-Demand)?	No
Split configuration into small files?	No
Root and postmaster mail recipient	yasunari @ yamasita.jp

```
Stopping MTA for restart: exim4_listener.
Restarting MTA: exim4.
odxl: ~ #
```

Verification

```
tswxl:~# mail yasunari@yamasita.jp
Subject: test from tswxl
test from tswxl
Cc:
odxl: ~ #
```

root @ Confirm that mail is sent from tswxl.yamasita.jp.

OK

TS-WXL
